

How to Teach Your Children about ID Security

With the creation of the Internet, we have seen unparalleled growth in opportunities to socialize, campaign, learn, play games, and do business. However, we have seen a rapid rise in crime too and this includes ID fraud which is bad for both the victim and for financial institutions and businesses, which often end up footing the bill in one way or another. Unfortunately, these criminals also target the most vulnerable, the elderly, and children.

As a parent, it is possible to teach your child about the basics of online security including ID protection - their identities can be stolen and used fraudulently in all manner of ways which can risk their future happiness and credit ratings.

Take the time to teach your children about:

- * Safe logging onto phones and other devices
- * Selecting strong passwords and how never to share them
- * Which emails are not ok to open
- * Educate them about the most common frauds

There is much more you can do as a parent to help protect your children from identity thieves. To find out more, check out the full article at:
